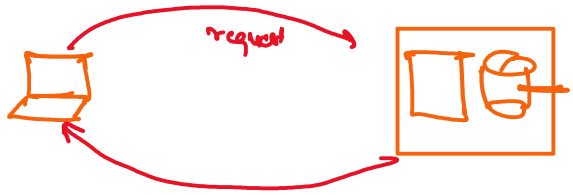
- Client-Server architecture / Request-response architecture ?



- Components of a Server
  - application Server. — framework. → Flask, Django, FastAPI.
  - database

- Protocols → set of rules.
  - ↳ eg.

- HTTP request model.
  - Method.

Create → Post
read → get
update → put
delete → delete

- Components of an HTTP request
  - Request method.
    - Post
    - Get
    - Update
    - delete.
  - Request header
    - Meta information.
  - Request body.

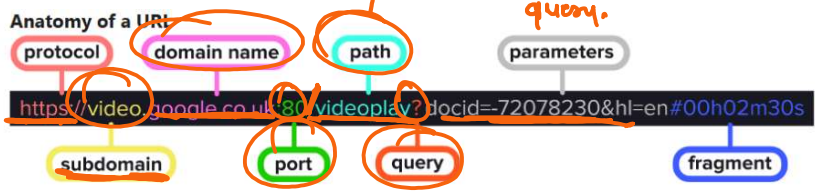
HTTP response
- Response status.
- Response headers
- Response Body.

- HTTP status codes. → 3 digit no.
  - 2xx → success
  - 1xx → Informational.
  - 3xx → redirection.
  - 4xx → Client Error.
  - 5xx → Server problem.
  - 999. → not a standard http response status code
    it is a user defined or custom status code.

• Do I still need a UI.

path | endpoint | route.

query.



docid = 72078. . . . .

query → parameter value.

Protocol → how the communication is established.

Domain name →

path

https://online.innomatics.in/myaccount/#/course/98946?lesson=935044&lesson_type=material&section=258589&subject=264

program → Flask → server: Application server component, Application code

handle
- routes (endpoint).
- request parsing. (method., header, body).
- Response building (status code, header, JSON/text).

WAP to add two number

```
a = int (input(
b = int (input
c = a+b
print c.
```

} repeat code

```
def. add (x,y):
    return x+y.
```
