Building a Chatbot with Memory

Monday, February 16, 2026 6:01 PM

Recap:

Create a Client with open AI ✗ paid, Gemini ✓, Groq ✓, Mistral (Rate)

Groq → API → QA system → Input User prompt

Interact with LLMs.

To decide the Beh → System prompt

Importance of User & Sys prompt

Agenda → Multi-turn Conversational Chatbot

↳ class 'Gemini API' → Chat → Functionality → Chatbot

What is the difference, incorporate b/w QA System & Chatbot?

→ Memory

Why memory? → Content-aware responses b/w Bot & User → Chat

Chatbot Must remember prev Conversation

Agenda

Customizing LLMs.

Control param

prompt eng.

Prompt chain

Lang chain

⇒ Lang chain → Importance Syntax → Interact QA, Chatbot

Session! Push appln → Front end → Local / Cloud

Session → assumes temp memory.

Frontend → Streamlit run app.py → UI / webpage hosted locally

Fronderd Streamlit → Streamlit run app.py → UI / webpage Hosted locally

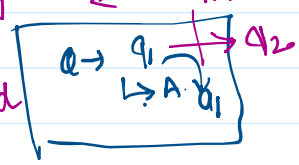
Memory ← Run.

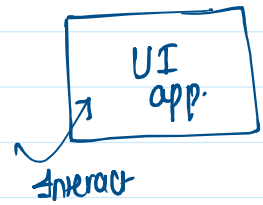
↓

Cleared

↓

QA Sys → Acceptable





Interact

For every interaction

↓

run appln.

In Conv. chat → Store content info

↓

Needs memory.

Session

↓

obj created in memory.

Create some Memory.

↓

Store info

↓

Span X Run

Till the Front end & Back end

session obj

St. Session_state → Create some space

↓

Save info.

For every Run

↓

Del the whole Temp memory

↓

Start run from line-1
