Add tools and Crating an agent

Monday, March 9, 2026 5:59 PM

Recap: Memory to LLM

By default LLMs are stateless.

LLM → stateful → Memory to LLM

⇒ To create memory → langchain_core → InMemoryChatMessageHistory()

To make LLM memory → [add Conv.]

Messages placeholder → Save Any number of Conv → Ask a query to LLM

In addn to query as a Content → All the Conv stored in memory → added to i/p LLM

input token becomes large → Costly. → More amt of time effect- latency

Avoid → Buffer memory → along with query → send last few messages as Content → New class

Easiest

Runnable Passthrough

parameter → Messages placeholder

Easiest

time effect- latency

n_messages = 3

↓

query + Last 3 messages added → LLM

Add tools LLM

↓

a tool → DUCK DUCK GO

Agentic → add tools → LLM

↓

Decide which tool to be employed based on user query

↓

LLM will decide in which tools to be employed

Agenda

- add tools LLM → Chain
- By add tool → create an Agent → React agent
