ChatBot with Memory, Context Window

Friday, March 27, 2026 6:02 PM

Recap:

Parallely updating nodes in a graph

Chatbots

a.--add--(b)

Function of a reduce function

Reducer functions

```
def State(TypedDict):
    'messages' : Annotated[ List[Msg], add ]
```

Function

add → a+b

appended

'messages' : [10]

reduce(fn, list]

→ applies fn on elements of list rec

reduce(add, [1 2 3 4])

1+2

3+3

6 + 4

→ 10

from operator import add

Built a Chat bot

```
def MessagesState(TypedDict):
    'messages': Annotated[ List[BaseMessage], add]
```

START

↓

Chatbot

↓

END

```
def chatbot
    ↓
    returns: a list of messages
```

state['messages'].

Again

+ Memory

+ Context window

+ Summary.
