Strings

16 July 2025 06:59 AM

Strings: collection of characters

Ex: Alphabets, special characters

x = 'strings'

x = 'Hello'

1*2 ⇒ 2

'a'*2 ⇒ aa

multiple line ⇒ """ ..... """

Index 0 1 2 3 4 → forward

x = Hello → | H | e | l | l | o |

-5 -4 -3 -2 -1 → Backward

x[1]

e

x[0] + x[1] ⇒ He

↳ concatinate

slicing (:)

text = 'python program'

0 1 2 3 4 5 6 7 8 9 10 11 12 13

text[0:6] → n → print n-1 till

↓

text[:6]

↓ Default is '0'

text[7:] → default end of the position

text[::1]

↓ start ↓ end ↓ step

text = python

text[1:3:1]

text[0:6:2]

n=5

PTO

text python program

text[::2] → 'PTO rgai'

x = python

↓

x[::-1]

↓

6

PYTHON PROGRAM

-14 -13 -12 -11 -10 -9 -8 -7 -6 -5 -4 -3 -2 -1

[::-8:-1]

n

space.

Built-in Functions

space.

Built-in Functions

1) len
2) count
3) upper
4) lower
5) capitalize
6) title
7) find
8) replace
9) split
10) join
11) strip
12) isdigit
13) isalpha.

Var = 'innomatics research labs'

len(var) ⇒ 24.

upper ⇒ upper letters

lower ⇒ lower letters

capitalize ⇒ first character in the text will become capital remains lower

title ⇒ each word first letter will be capital

count ⇒ count no. of times that char appears

startswith → check whether the starting with a char

ends with → check whether ends with that character

find → search and give the position of searching char.

Name.find(' ') find

Var.find('research')

first char

1 Lakh

Rama Krishna gopal → 4

Ramesh Raj Reddy → Ramb

Name [: Name.find(' ')]

Replace → Replace New character with old character

Replace → Replace New character with old character

a → @

Var.replace('a', '@')

Index → same like find.

Index → Through an error

find will not through

isdigit → Var.isdigit()

→ False

isalpha → check alphabets

Var.isalpha() → True

split → Var.split('_')

join → joining / Concatinating collection of word

' '.Join (split_alp) with separator

strip → Remove unwanted spaces

format

date = "Today is Thursday"

print (date) { }

print ('Today is { } and it is { }'.format('Friday', 'raining'))

Today is Friday and it is raining.

Input :-

num = Input ("Enter a odd number")

mult = num/2

print (mult)
