# Introduction to Langchain

Thursday, February 19, 2026 6:00 PM

**Recap:**

Adv. Prompt Engg.

↳ why?

Simple prompt ⇒ LLM may not understand your intention

⇒ LLM are Lazy thinkers

⇒ LLM jump to conclusions.

No need to provide long prompt

↓

Lang Chain

↓

Prompt Templates ⇐

↳ Modify some portions of prompt

↓

Better responses

Python f'string.

zero prompt:

Few shot prompt:

prompt + add examples.

Chain of Thoughts

(Query) prompt + example + Ans ⇒ Describes precisely

↓

LLM follows ⇒ similar type the reasoning to answer query.

Self-Consistency Chain of Thoughts

↓

Queries

↳ Not always end up @ same respons

Assumptions consider while responding to query.

Rep CoT → Multiple times

↓

Majority vote (Multiples responses)

↓

Final response

Tree of Thoughts

↓ → More complex → Answering by learning a way of

Evalue different strategies/Thoughts

Reasoning

Self-Critique → product design

langchain - experimental → Smart Chain

Gen way Answering → address query → Critical eval → Best way.

Generating Idea → Evaluate → One Best Idea

Self-feedback → Ask LLM - feedback about its own generated content

ReAct:

All prev → Involves - Reasoning.

User → Query → Reasoning + Acting

Reasoning + Acting → Automatically select a Tool → Task → Tools available

Acting → Interacts with

Reasoning
Action
Observe

Lang chain

@ application development

what?

why?

→ Unity ⇒ application development

Never bother API

Irrespective of API → app dev proc remains same

App

App

open ai API

write the whole code another Gemini SDK

API

change whole code

A frame work

Langchain

with one line change switch from one api to another api

2) LLMs are Stateless.

LLMs cannot remember ongoing conversation & past conversation

Most of the applcn needs contextual info.

Memory

Memory. –

Lang chain – tools / provision to store context info

3) Context- aware

Proprietary, very recent piece of info

Query

Cannot provide

RAG

Hallucinate response

4) Reasoning

Agents

↳ Agents

↳ Interface tools to the LLM

↓

Based on Query LLM will decide

↓

which tool to be used to fetch info.

& which order the tool should be used to get better info

What Lang Chain

↳ Connector

↓

Make many tools to connect

↓

Build a better applicn

Build Beautiful models with LEGO Blocks →
