Langchain Introduction - Huggingface

Friday, February 20, 2026 6:02 PM

Recap: Langchain

What?

Build LLM applications

↓

Adv ⇒ Interface

↓

LLMs can Interact with Many.

↓

Build Robust applications.

Why?

1) Unify Application Dev. proc

frees LLM provider using

Application → we can easily switch LLMs providers.

2) LLM's are Stateless

Langchain provides Tools / syntax add memory to LLM app

3) Content - aware

↓ App needs access to any proprietary doc

↓ we can't train / fine tune

↓ costly

↓

Add content LLM through Tools.

RAG

Add tools

↓

LLM can access Recent info.

4) LLM's - Lacks - Reasoning

↳ Langchain + Add tools.

↓

LLM's automatically select Tool

↓

Suitable

↓

Automatically.

LLM can decide the sequence in which

sequence in which tools can be used/access.

structure
