# Memory: Conversational and Window memory

Monday, March 2, 2026 9:05 AM

Recap:

How to create Memory

→ ChatMessageHistory

↓

langchain_community.chat_message_histories.

Alternative available

→ InMemoryChatMessageHistory.

↓

langchain_core.chat_history.

↓

Create a history object → Memory

→ Store Conversation ✓

↓

add Conv to LLM

↓

Based on History

LLM can answer queries.

1) ✓ How to add Conv to Memory.
(Single Sessions)

2) ✓ How to add Multi Session Conv to memory. ✓

3) ✓ Chat bot with memory → Everytime → LLM → a large set of historical Context messages.

4) ✓ Memory Window
↳ last 5 messages.
last 10 messages.

Runnable is a class Lang chain

→ All the elements which we can run

(prompt template)

→ All the elements which we can run

Runnable { prompt template, Model, parser } . invoke

pT.invoke → o/p → o/p by sub heads

model.invoke → o/p from LLM

↓

ele → adding to chain → Runnables.

↓

Combination of runnables → Runnable

Run 1 (invoke) PT → Run 2 (invoke) Model → Run 3 (invoke) parser → Run 4 (invoke) Memory

Chain

↓ invoke

↓ Runnable

Runnable (i/p → o/p) with Memory history associated memory. add elements to chain

prompt (i/p) → PT $\xrightarrow{o/p}$ LLM $\xrightarrow{o/p}$ Parser $\xrightarrow{o/p}$ Memory

Runnable with Memory history

chain = PT | LLM | parser | Runnable with Memory history
